

Reimagining the Commercial Operating Model for the Age of AI

The Agentic Front Office

PwC

Your customer's AI already knows what they want. Does your front office?

Today's customers are **faster, more informed, and increasingly AI-assisted**. They expect seamless, relevant experiences — and when your commercial organization fails to deliver, they don't forgive it. They just leave.

The companies that win the next decade will rebuild around the customer's reality — not their own org chart.

The Agentic Front Office is how you do it.

THE CHALLENGE

Forces are converging on a front office that hasn't fundamentally changed in 50 years

Disruption isn't new. Google changed search. Amazon changed purchasing. But the AI-driven disruption we see today is targeting a part of your business that **hasn't fundamentally changed in 50 years: your front office.**

Customer Behavior Shift

The AI-mediated buyer

Your customers' agents are making decisions before your sales team can engage. The path-to-purchase has become real-time, contextual, and non-linear

B2B is becoming A2A

Procurement agents are already buying on behalf of humans. Organizations not built for agent-to-agent commerce will be invisible at moment of decision.

Broken seams & systems

Technology has advanced, but processes haven't kept pace. Deep fractures between functions leak revenue, context, and loyalty at every handoff.

If the path to purchase for consumers stopped being a funnel years ago, **why are our organizations still structured as if nothing has changed?**

30% of CEOs confident in organic revenue growth over the next 12 months¹

56% of CFOs rank cost optimization in their top 5 priorities for 2026²

~30% of revenue consumed by sales, marketing & service operating costs²

75% of executives cite AI as top-3 priority, yet 3 in 4 see no tangible value³

THE OPPORTUNITY

In an agentic market, the companies that move first capture a structural advantage

● Revenue Acceleration

Fragmentation loses deals. Integration wins them.

- Pipeline captured at every handoff
- Upsell & renewal signals acted on in real time
- Speed to response becomes a competitive edge
- AI-driven growth becomes the norm, not the exception

Competitors can't capture what you see first.

● Efficiency That Scales

Manual gaps inflate cost. Automation bends the curve.

- Headcount focused on value, not system friction
- Revenue growth without linear cost growth
- Preventable errors eliminated at source
- Output scales faster than cost

The math starts working in your favor.

● Loyalty That Compounds

Friction drives churn. Relevance drives retention.

- Consistent experience across every touchpoint
- Competing on insight, not just price
- Knowing your customer better than the AI-native rivals
- Loyalty advantage built and defended

Seamlessness compounds over time.

● Structural Speed

Slow processes cede ground. Connected systems win it.

- Marketing, sales & service move as one
- Demand generated and converted in the same motion
- Real-time decisions vs. manual approvals
- Built for a non-linear world

The organization moves as the market moves.

INTRODUCING AGENTIC FRONT OFFICE

We envision a new commercial operating model – a self-orchestrating growth system that compounds value across every customer interaction

The Agentic Front Office: an intelligent commercial ecosystem that senses, activates, and scales – powered by a self-learning Commercial Brain

Unified Commercial Operating Model

This redesign shifts your commercial organization from siloed functions to a unified growth engine. The Connected Growth Core aligns marketing, sales, commerce, and service in real time.

Powered by a "Commercial Brain"

The Commercial Brain converts your proprietary customer data and relationships into a self-reinforcing intelligence advantage competitors can't replicate.

Designed to Augment Human Potential

Designed to elevate, not replace, your talent — automation enables humans to focus on judgment, strategy, and relationships. *Humans for judgment. Agents for execution.*

Compounding Growth at Enterprise Scale

The AFO unlocks compounding, always-on growth by decoupling revenue from headcount and powering continuous, enterprise-wide performance acceleration.

INTRODUCING AGENTIC FRONT OFFICE

We have five guiding principles for an Agentic Front Office transformation

An agentic transformation is not just a technology implementation; it is a fundamental shift in your commercial operating model. Based on our experience, success depends on adhering to **five core principles from day one**.

We are leading a fundamental shift in how commercial organizations work

The old model of managing discrete functions and cases is over. The future is orchestrating holistic customer moments.

UNIFIED COMMERCIAL OPERATING MODEL

From disconnected functions to one integrated model — organized around your customer's journey, not your org chart.

THE PROBLEM:

Siloed Functions Are Costing You

Most commercial organizations are structured around internal convenience — Marketing, Sales, Commerce, Pricing, and Service each optimizing for their own metrics.

The result is invisible to leadership but painfully visible to customers: repeated handoffs, lost context, manual approvals, and revenue that quietly leaks at every seam.

The question isn't who owns the customer. It's whether anyone does.

Operating in silos with manual handoffs & approvals

THE SHIFT:

Unified Commercial Operating Model

A Unified Commercial Operating Model reorganizes around three customer-facing motions — **Demand, Transact, and Grow** — underpinned by a shared operating model and a single "Commercial Brain" that connects data, decisions, and actions across every function.

The bottleneck isn't your people. It's the processes they're trapped in.

THE COMMERCIAL OP MODEL

FOUR TRUTHS DRIVING THE URGENCY

- 1 Accountability gaps are structural.** Until your CMO, CRO, and COO share a definition of winning, silos will persist regardless of technology investments.
- 2 Separate scorecards produce fragmented experiences.** Customers don't experience your org chart — they experience the gaps between it.
- 3 Approvals and handoffs are friction, not governance.** Every exception and review is a moment where value leaks.
- 4 Are yours ready?** Organizations not built for agent-to-agent commerce will be invisible in the moments that matter most.

UNIFIED COMMERCIAL OPERATING MODEL

Every organization is somewhere on the journey from siloed execution to autonomous commercial intelligence.

Not sure where you are? PwC's Sprint to Signal diagnostic places you on this model in days, not weeks

UNIFIED COMMERCIAL OPERATING MODEL

Each function follows the same arc: from constrained execution to agentic capability

FUNCTION	CURRENT CONSTRAINT	AGENTIC CAPABILITIES	VALUE UNLOCKS
MARKETING	- Quarterly campaign cycles - Content production measured in weeks - Segment-level personalization	- Always-on journey orchestration - Continuous content supply chain - GEO-optimized brand presence for AI-mediated discovery	10x content output +8% conversion lift 37% faster time to market
SALES	60% of seller time on non-selling tasks - Reactive pipeline management - Periodic forecasting	- Autonomous lead qualification and routing - Real-time next-best-action guidance - Always-on AI-powered forecasting	3.7x more likely to meet quota 15–25% shorter sales cycles 40% forecast accuracy improvement
COMMERCE	70% cart abandonment - Human-paced discovery and purchasing Significant headcount correcting order errors	- GEO-structured catalogs for AI discovery - API-driven autonomous transactions - Agent-to-agent commerce capability	30–50% faster B2B transaction cycles 60% reduction in manual intervention 10–15% revenue lift from personalization
SERVICE	- Channel-based routing - Context lost between touchpoints - Reactive case handling	- Intent-driven multimodal orchestration 80% of Tier-1 intents resolved autonomously - Service as commercial intelligence source	30–50% contact deflection 10–15 point NPS improvement 30–40% operational cost reduction
PRICING	- Periodic price cycles - Static discount thresholds; - Leakage identified after quarter closes	- Setting Agents for continuous price optimization - Netting Agents enforcing margin guardrails in real time - Getting Agents for proactive revenue defense	1% price improvement = 6–8% operating profit uplift 3–5% revenue recovery from leakage remediation 415bps margin improvement

POWERED BY A “COMMERCIAL BRAIN”

The Agentic Front Office is powered by data, agents, and a continuous feedback loop

At the core of the AFO is the Commercial Brain: three interconnected layers that together **sense**, **act**, and **continuously improve**. This is not a generic AI platform — it is an intelligence system built on your proprietary data, your customer relationships, and your commercial context.

The Commercial Brain

POWERED BY THINKER AGENTS

Your proprietary data turned into privileged insights no competitor can replicate

The Agent Network

POWERED BY DOER AGENTS

A pre-built ecosystem of specialized agents executing across functions, driven by customer moments

The Intelligence Feedback Loop

POWERED BY SENSOR AGENTS

Every interaction is a signal fed back into the Commercial Brain – the engine that compounds value with every interaction

THINKER AGENTS build the intelligence. **DOER AGENTS** act on it. **SENSOR AGENTS** learn from the results. With every customer interaction, the entire system becomes more *precise*, more *predictive*, and more *valuable*.

POWERED BY A “COMMERCIAL BRAIN”

Built on an outcome-oriented agentic architecture, Agentic Front Office transforms systems of record into systems of action

Guiding Principles

Channel-agnostic by design

Separate experience logic from vendor-specific tooling so the same commercial intelligence can serve a human buyer, an employee, or an AI procurement agent

Orchestrate, don't consolidate.

Connect the existing stack without forcing a single-platform mandate

Multi-model is the new multi-cloud.

No single "best" model, only models best for specific task classes. Intelligence is abstracted, routed, and centrally governed

Key Differentiator

Your proprietary context is your durable moat.

Customer identity, pricing logic, and brand knowledge must remain portable and sovereign

Key Differentiator

Trust is architectural, not aspirational.

Governance embedded at design time enables scale; governance bolted on later creates risk

We don't build agents to automate steps. We build agents to own outcomes.

POWERED BY A “COMMERCIAL BRAIN”

PwC’s developed an Agentic Library that is built for speed and proven in market

The agents in our library are the specific capabilities that bring the three components of the Enterprise Engagement Fabric to life. Thinkers building the Commercial Brain, Doers executing the Agent Network, and Sensors powering the Intelligence Feedback Loop.

OUR AGENTIC LIBRARY: Each scenario below isn’t a process map — it’s an outcome delivered. The agents find the path.

CX & Intelligence Agents

Role: (Thinker) Synthesize signals, map journeys, and ensure every customer-facing interaction reflects your brand consistently

Marketing Agents

Role: Audience intelligence, performance analysis (Thinker) + campaign execution, content generation, journey activation (Doer)

Sales Agents

Role: Opportunity intelligence, deal coaching (Thinker) + quoting, contracting, pipeline management (Doer)

Pricing Agents

Role: Scenario modeling, margin intelligence (Thinker) + real-time guardrails, compliance enforcement (Doer)

Commerce Agents

Role: Transaction execution, catalog navigation (Doer) + signal capture from buying behavior (Sensor)

Service Agents

Role: Signal capture, intelligence generation (Sensor) + resolution, orchestration, renewal management (Doer)

DESIGNED TO AUGMENT HUMAN POTENTIAL

The Agentic Front Office reorganizes work around customer moments — not functions

The traditional funnel was designed around how organizations process customers, not around how customers buy. **In an agentic world, that model is obsolete.**

The new organizing principle is four customer moments — each one an opportunity for **agents to execute** and **humans to lead**.

The agentic shift doesn't replace talent, it elevates it.

The best experiences are not automated. They are choreographed.

**Trust isn't earned by agents.
It's designed unto them.**

Governance, guardrails, and human oversight are not constraints on the system, they are what makes the system safe enough to scale.

**Choreography is a design choice.
Not a default.**

The moments that matter to your customers are too important to leave to chance or to automation alone.

**The agent knows the history.
The human reads the room.**

Sustainable advantage comes from activating your proprietary context, so every human and agent interaction feels personal, not generic.

**Delight is not a feature.
It's design discipline.**

The Agentic Front Office earns loyalty not by being faster, but by being more human where it counts.

DESIGNED TO AUGMENT HUMAN POTENTIAL

In the workforce of the future, every function evolves in the same direction: from execution to strategy.

Sales: From "Administrators to Deal Architects"

Sellers manage a team of agents. The CRM is a dashboard of exceptions, not a data entry system. Strategic relationships and complex negotiations are the entire job

Marketers: From "Campaign Managers" to "Engine Builders"

Marketers design the autonomous commercial engine. Campaigns run continuously, not quarterly. The marketer's job is architecture, not execution

Service: From "Firefighters" to "Growth Catalysts"

Agents handle 60–80% of routine intents, freeing service professionals to focus on complex, high-value interactions. Every interaction generates intelligence that improves the system.

From "Channel Operators" to "Commerce Strategists"

Commerce teams design the rules, guardrails, and personalization that enable agents to serve human and AI buyers at scale. The channel becomes an always-on intelligent system.

This is not about eliminating roles, it is about elevating them. Every function gets more strategic, not redundant. Agents handle the complex, data-intensive, and repetitive tasks that currently consume human capacity so that humans spend 100% of their time on the work only humans can do.

COMPOUNDING GROWTH AT ENTERPRISE SCALE

The Agentic Front Office systematically reverses the downward spiral – turning each threat into compounding opportunity and growth

Revenue Leakage → Accelerated, More Profitable Growth

- +10–20% revenue per rep
- +40% conversion uplift
- 15–25% stalled pipeline reduction
- 5–10% renewal lift
- Unlocks new \$1B+ markets

From plugging leaks to unlocking structural growth

Unsustainable Costs → Margin Protection & Operating Leverage

- 30–40% cost reduction
- 30–50% contact deflection
- 80% after-call work reduction
- 10–15% labor savings
- +4 pts margin advantage (AI leaders)

Breaks the headcount-to-output equation

High-Risk Transformation → De-Risked, Self-Funding Reinvention

- 8–12x ROI
- Phased value capture
- Early wins fund next wave
- Outcome-based commercial model

Transformation that accelerates — not stalls

Strategic Paralysis → Workforce Elevation & Productivity

- 4x account capacity
- 10–20% productivity lift
- 2–8% immediate time savings
- 50% faster time-to-hire
- Digital workforce at scale

Humans for judgment. Agents for execution.

COMPOUNDING GROWTH AT ENTERPRISE SCALE

The organizations building value with an Agentic Front Office aren't just more efficient, they are structurally more competitive

Powered by
Commercial Brain

↑ **Lifetime value per account** through agentic AI ordering intelligence

Deliver Profitable
Growth at Scale

70,000 fans delivered personalized AI-powered VIP game-day experiences

Powered by
Commercial Brain

↑ **Margin protection** and faster quote-to-cash through AI-powered CPQ governance

Powered by
Commercial Brain

85% faster billing cycles
(48 hrs → <7 hrs)

Designed to
Augment Human
Potential

Thousands of employee hours freed through AI digital workforce

Deliver Profitable
Growth at Scale

AI-powered race operations optimization driving cost and resilience gains

PWC COMMITMENTS

The Agentic Front Office is a commercial transformation that must be led from the top and rooted in four key leadership commitments

	Own the Commercial Engine, Not Just the Functions	Make Your Data a Strategic Asset	Anchor Every Decision to a Business Case	Design the Workforce of the Future Now	Build Governance Into the Architecture from the Beginning
COMMITMENT DESCRIPTION	Integrated leadership at the CEO level is the prerequisite for integrated commercial performance	Proprietary data, unified and machine-readable, is the only durable moat in a world of commoditized AI	Value at stake, rigorously defined and relentlessly measured, from the first use case to full-scale transformation	Human-agent teaming models, new roles, and redesigned incentives cannot wait until the technology is deployed	Governance is the economic enabler of agentic autonomy — not a constraint on it
STRATEGIC REALITY	Agentic transformation fails in silos. Only CEO-led integration across Marketing, Sales, Commerce, and Service unlocks a truly integrated commercial engine	Foundation models are commoditizing fast and your proprietary data is the only durable moat your commercial engine has	Organizations capturing real value didn't deploy most agents. They built a rigorous business case, proved value at the use-case level, and scaled what worked	Technology can be deployed in months but the roles, incentives, and human-agent teaming models that determine whether it delivers value take years to build	Governance defined concurrently with agent architecture enables faster, safer deployment . Bolted on later, it creates brand, compliance, and trust failures that are costly to reverse.
WHAT THIS MEANS	Redefine success at the enterprise level and make revenue growth, margin protection, and customer lifetime value shared outcomes	Treat data infrastructure as a strategic investment, not an IT cost	Demand measurable outcomes from day one. Every initiative must be anchored to a clear value hypothesis with defined metrics	Treat workforce redesign as a parallel workstream with distinct roles that will define your commercial organization	Establish governance from day one — covering human-in-the-loop thresholds, audit trails, model risk management, and cost governance.
UNCOMFORTABLE TRUTH	If your CRO, CMO, and COO don't share a definition of commercial success, no technology investment will close the gap	The companies winning with AI are not those with the best models, but rather, those with the cleanest, most connected data	Transformation without a business case is experimentation at enterprise cost	Agents powering redesigned commercial architectures deliver transformational change	Without structured guardrails, autonomy creates risk at scale. With them, it creates compounding advantage

These commitments define what must be true. PwC's approach is designed to make them real, faster than you expected, and more accountable than you've experienced before

OUR APPROACH

Our Agentic-First approach activates a self-funding growth system that compounds and scales at speed

Each phase is not just a milestone – it is a layer of the growth system coming online and compounding over time.

The PwC Differentiators

We use agents to run our own diagnostics.

Proprietary diagnostic agents compress weeks of discovery into days.

We assess and act simultaneously.

Phase 1 is not preparation for action; it is action.

We prove before we scale. Every next-phase investment is justified by evidence from the last.

We align our incentives to yours. Phase 3 commercial model tied directly to measurable cost, revenue, and margin impact.

CLOSING

The organizations that will define the next decade of commercial performance are making the decision now

The Market Shift Is **REAL**

- AI is redefining the commercial engine and leaders are already setting the pace.
- The gap between leaders and followers is widening. 75% of CEOs are prioritizing AI — but few have realized value.
- **That gap is where leaders differentiate.**

What we are **BUILDING**

Market-defining POV on AFO

Not a generic AI services offering

A proven, repeatable operating model

Sprint to Signal has been deployed across multiple clients and industries

Full-spectrum capability

Strategy through deployment through outcomes — not just advisory, not just systems integration

Pre-built agent library

we start from proven, not from scratch. Faster time to value.

Alliance ecosystem

Salesforce, Adobe, and others embedded at the technology layer — not platform-agnostic theory

Outcome-based commercials

We are accountable for results, not hours

What this means for **YOU**

Lead with conviction

Align leadership around a clear agentic vision

Start with a wedge

Identify a high-impact entry point in your front office

Build momentum quickly

Scale what works across the commercial lifecycle

The Agentic Front Office is not the future of your commercial operating model. It is the present for the leaders who choose to see it.

We are not catching up. We are setting the standard.

Appendix

Orchestration Deep Dives: How The Agents Work Together

1

Orchestration Scenario 1: Campaign to Close

The journey from first signal to signed contract — without a single manual handoff:
A prospect engages with a campaign. By the time a seller is involved, the deal is already half-done.

Business Outcome: Compressed sales cycles, higher win rates, consistent margin discipline — with sellers spending 100% of their time on the work that closes deals.

Orchestration Deep Dives: How The Agents Work Together

2

Orchestration Scenario 2: **Detect to Retain**

The journey from churn signal to renewed contract — before the customer even considers leaving. A usage drop is detected. Before the customer notices a problem, the solution is already in motion.

Business Outcome: 20–30% improvement in targeted save programs; higher renewal rates; customer lifetimevalue protected before erosion begins.

Orchestration Deep Dives: How The Agents Work Together

3

Orchestration Scenario 3: **Service Signal to Sales Opportunity**

The journey from a service interaction to a revenue-generating moment — in real time: A customer calls about a billing issue. By the time it's resolved, an upsell has been identified and presented.

Business Outcome: Service transformed from cost center to growth engine; contextual cross-sell conversion during service moments; revenue leakage from policy inconsistencies eliminated.

Orchestration Deep Dives: How The Agents Work Together

4

Orchestration Scenario 4: **Autonomous Commerce**

The journey where your customer's AI agent buys from your AI agent — no human on either side: A procurement bot submits a request. A commercial agent responds, negotiates, confirms, and closes — autonomously.

Business Outcome: 24/7 autonomous B2B commerce, zero manual intervention for standard transactions, margin-safe at every step, the commercial engine that never sleeps.
