

ARIA: Scaling Adobe-Led Front Office Transformation

Agentic Revenue & Intelligence Accelerator. A joint PwC-Adobe program to build a new growth engine within CSX. Two core capabilities (Intelligent Content Operations and Autonomous Experience Orchestration) deployed through a Sprint > Scale > Enterprise engagement model across four industries: Financial Services, B2B Technology & Telecom, Industrial Products, and Healthcare/Life Sciences/Pharma. Adobe is the activation platform. PwC owns the commercial architecture, delivery model, and client relationship.

THE ENGAGEMENT MODEL

Sprint (\$0-1M, 8-12 weeks): Prove a measurable micro-journey. Minimal Adobe licensing (sandbox/trial). Business case built in parallel. **Scale (\$5-15M, 12-16 weeks to launch):** 2-4 use cases in production. Full Adobe license expansion. Operating model design, integration, change management. **Enterprise (\$15-50M+, multi-year):** Full AFO transformation. Managed services. Agent Ops. Adobe embedded as permanent activation layer. Services multiplier grows from 1.45x (Sprint) to 2.0-2.5x (Scale) to 3.0-5.0x (Enterprise) as work shifts from technology to transformation.

3-YEAR SERVICES REVENUE: THREE SCENARIOS

	Sprints	Sprint rev	Scale deals	Scale rev	Ent. deals	Ent. rev	Total services
Conservative: slower pipeline build, 2.0x Scale multiplier, 3.0x Enterprise							
FY1	15	\$9M	10	\$66M	0	\$0	\$75M
FY2	22	\$13M	15	\$132M	3	\$60M	\$205M
FY3	28	\$17M	20	\$163M	6	\$150M	\$330M
3-Year	65	\$39M	45	\$361M	9	\$210M	\$610M
Midpoint: target pipeline, 2.25x Scale, 4.0x Enterprise							
FY1	18	\$11M	11	\$74M	0	\$0	\$85M
FY2	25	\$15M	18	\$142M	3	\$72M	\$229M
FY3	30	\$18M	22	\$173M	7	\$168M	\$359M
3-Year	73	\$44M	51	\$389M	10	\$240M	\$673M
Stretch: strong Q1 start, 2.5x Scale, 5.0x Enterprise							
FY1	20	\$12M	12	\$76M	0	\$0	\$88M
FY2	28	\$17M	20	\$141M	4	\$90M	\$248M
FY3	32	\$19M	25	\$186M	9	\$180M	\$385M
3-Year	80	\$48M	57	\$403M	13	\$270M	\$721M

SERVICES MULTIPLIER PROGRESSION

ADOBE CO-INVESTMENT (IN NEGOTIATION)

Adobe is being asked to co-invest across three streams: pre-wired Sprint infrastructure engineering (India-based pods per sector), product intelligence (quarterly deployment insight reports for Adobe's product team, including Agent Orchestrator feedback), and business case co-funding (Value Architect role in each Sprint). The co-investment is structured as a fraction of the ARR the program generates, with the percentage decreasing as the program scales and the flywheel compounds. PwC's own investment in delivery capacity is significantly larger than the Adobe ask. The co-investment accelerates the program but does not gate it. ARIA proceeds regardless; Adobe's participation determines the speed.

PWC PROPRIETARY ASSETS

Agentic Front Office (AFO): PwC's commercial model for enterprise front office transformation. The strategic narrative that positions ARIA. **Regulated Content Orchestrator (RCO):** PwC-built accelerator for compliance-governed content workflows in insurance, banking, pharma, and industrial. **Micro-Journey Playbook:** 13 industry-specific use cases across 5 sub-segments with 90-day execution plans. **Sprint Delivery Template:** Parallel workstream model (prototype + business case architecture) with Value Architect role.

TEAM BUILD: FULL TALENT PIPELINE WITH INDIA LEVERAGE + AI AGENT AUGMENTATION

US (onshore)	Seed	FY1	FY2	FY3
Partners / Managing Directors	2-3	5-6	7-9	9-11
Directors	2-3	8-10	14-18	18-22
ACREs (Sales Directors)	1-2	3-5	6-8	8-10
Senior Managers	2-3	10-14	20-26	25-32
Managers	1-2	16-22	30-38	38-48
Senior Associates	0	16-22	34-42	42-52
Associates	0-1	10-14	20-26	28-36
Total US	8-14	71-98	135-175	172-217

India + AI leverage	Seed	FY1	FY2	FY3
Client delivery (engineering, integration, Agent Ops, managed services)	0	38-50	78-104	110-145
Foundation pods (Adobe co-funded)	8-10	12-14	22-26	22-26
Total India	8-10	50-64	100-130	132-171
AI agent FTE equivalents saved	0	~15	~55	~110

Totals	Seed	FY1	FY2	FY3

Revenue per human head*	-	\$520-610K	\$750-830K	\$900K-\$1.1M

TALENT PIPELINE LOGIC

Fixing the pyramid. Today's team is top-heavy at Partner/Director and has Associates at the bottom, but is dangerously thin in the middle. The Senior Manager and Manager ranks are where delivery leadership, client workstream ownership, and India pod management live. Without a strong middle, Partners are pulled into execution and Associates have no one to learn from. ARIA's build is designed to fill the middle first: Senior Managers and Managers are the priority hire in FY1, with Senior Associates and Associates growing underneath them to create a sustainable pipeline that produces the next generation of Directors and Partners internally rather than acquiring them from competitors.

PRE-FISCAL SEEDING PERIOD: APRIL THROUGH JUNE

The next 90 days determine FY1 trajectory. The seeding period is used for pipeline development, account qualification, ARIA Foundation engineering (India pods begin building pre-wired Sprint infrastructure), Adobe co-investment negotiation, and securing 2-3 signed Sprints for a July 1 launch. This requires a small growth core: 2-3 Partners/MDs for account development and the Adobe relationship, 1-2 ACREs to begin building the origination pipeline (we have 3 today; need to activate them on ARIA accounts immediately), 3-4 Senior Managers/Directors for Sprint design and delivery readiness, and 8-10 India engineers for Foundation build-out. This is the investment that de-risks FY1 Q1 and ensures we launch into the fiscal year with active engagements, not a cold pipeline.

WHAT MAKES THIS DIFFERENT FROM A TYPICAL ALLIANCE PLAY

Not implementation services. ARIA is outcome-led. Adobe is the activation platform inside PwC's Agentic Front Office commercial architecture. The services multiplier grows from 1.45x to 5x because the work shifts from technology deployment to business transformation. By Enterprise, we're doing operating model redesign, managed services, and Agent Ops, not configuring AEM.

M&A CONSIDERATION

Organic hiring to 300-390 in three years is aggressive, particularly in the functional roles (change management, operating model, process design) where talent is competitive. If FY1 results justify it, acquiring a mid-size firm (100-200 people, US + India presence) with Adobe platform skills and functional consulting depth in FY2 could accelerate Scale and Enterprise delivery capacity by 12-18 months. Priority profile: strong in AEP/AEM integration with consulting depth in marketing operations and commercial transformation, not a legacy AEM body shop. This is an option to evaluate based on FY1 performance, not a requirement to start.

ACREs are the origination engine. Starting from 3 today, scaling to 8-10 by FY3. Without dedicated sales capacity, the delivery team starves. Each ACRE carries 8-10 active pursuits across Sprint, Scale, and Enterprise. By FY3, that's 80-100 pursuit capacity against a pipeline of 60-70 active deals.

AI agents augment capacity conservatively by 20-35%, with initial gains in automated testing, configuration validation, Agent Ops monitoring, and managed services triage. Over time, we expect to expand efficiencies across the entire development lifecycle. We practice what we sell.
